

The Reference Companion.

Molecular references.
Analytical records.
Better-informed conversations.

IN THIS EDITION

- 02 Understand the reference
- 03 Read the record
- 04 Prepare your enquiry
- 05 Pure Peptides App: coming soon

Company information for professional enquiries. This guide does not provide treatment, dosing, preparation or administration instructions.

purepeptidesph.netlify.app

Start with identity.

A molecular illustration is a useful reference. It is one part of a much larger record.

01 Name the material precisely.

Common names and abbreviations can be ambiguous. Confirm the specific identity, sequence where relevant, and any stated salt or counterion. Do not assume that a familiar abbreviation identifies one exact substance.

02 Separate a reference from a sample.

A database structure, formula or molecular weight describes a reference entry. It does not establish the contents, purity, strength or suitability of a particular vial or shipment.

03 Treat mixtures as mixtures.

A blend or formulation may contain several components. A single diagram or formula should not be taken as a complete description of the mixture.

A useful question

"Which exact identity and batch does this information describe?"

Look beyond a headline.

Read a certificate or analytical report in context. Check what it tests, what it reports and how it relates to the batch.

01

Identity & batch

Match the material description and batch reference to the record you are reviewing.

02

Issuer & report details

Check the issuing laboratory, report number and date. Request clarification where details are incomplete.

03

Methods & results

Look at the methods, reported units and the actual scope of testing. A purity result is not a complete safety assessment.

04

Questions & gaps

Ask for missing pages or context. Do not infer unreported characteristics such as sterility from an unrelated test.

[Batch verification in the Pure Peptides App](#)

Account-based verification is planned for the Pure Peptides App. Until launch, contact our team for existing batch-record questions.

Context makes the conversation clearer.

Introduce your organisation and describe the actual work and documentation you need.

01 Who you are

Your organisation, professional role and a business contact address.

02 What you need

The material name or existing reference, and the specific documents or information requested.

03 The intended work

A clear description of the actual purpose. Requests are assessed individually; an enquiry does not confirm supply or eligibility.

Please avoid sending unnecessary personal or patient information.

Your next connection.

We are planning a private member space with an NFC card that opens the member portal on supported phones.

PLANNED EXPERIENCE

Download app.
Create account.
Sign in.
Verify a reference.

For approved adult members

The planned app will ask visitors to confirm they are 18 or older before continuing. Membership approval and secure sign-in will be separate steps. An age confirmation is a self-declaration, not proof of age.

The NFC card or QR link will open the portal. Secure sign-in will protect member content and planned batch-reference checks. A lookup relates to a record; it does not independently test a physical vial.

The app is not available to download yet. Features and availability will be confirmed closer to launch.
